

# Bouncing bats

1. Cut a rectangle of kitchen foil for the bat's body. Then, scrunch it tightly, about a third of the way along, like this.

2. Cut a long, thin rubber band, to make a long piece for hanging the bat. Tie one end tightly around the crunched part of the foil.

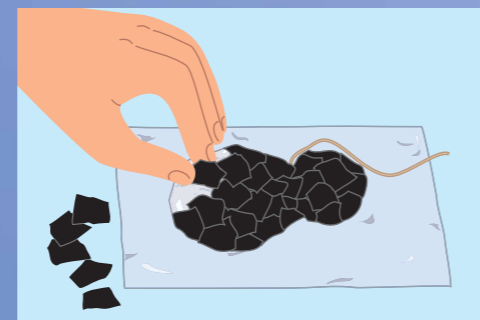

3. For the head, scrunch the shorter end of the foil in on itself. As you scrunch the foil, bend it in to where the rubber band is tied.

Make sure that the rubber band still sticks out of the middle.

4. Scrunch the other end of the foil in the same way, to make the body. Then, squeeze the head and body, to make them rounded.

5. Rip lots of small pieces of black tissue paper. Then, lay the bat on plastic foodwrap and brush part of it with white glue.

6. Press pieces of tissue paper onto the wet glue. Then, brush on more glue and press on more paper, until the bat is covered.

7. Fold a strip of black paper in half, with the short ends together. Draw a wing shape against the fold, then cut out the shape.

8. Draw two ears on black paper, with a tab at the bottom. Cut out the ears, then glue their tabs, and the wings, onto the bat.

9. Draw the bat's mouth with a silver pen. Then, draw eyes and fangs on white paper. Cut them out, then glue them on.
